

Letters to the Editor ...

NB: Please keep letters to approx. 100-200 words in length. —Ed.

Re: Control of Australia

Dear Editor: As an Australian all too familiar with long periods of unemployment, I must comment on Australia's great human tragedy. The culture of long-term unemployment—both rural and urban—is alienating and destructive. For many, the culture shock is followed by mental depression and suicide.

Our jobless are real people with real lives. They're sick of being twisted and sanitised into cold, lifeless statistics. From their fine offices, economists and politicians manipulate, and divert attention from, Australia's lost generations. It's a tragedy.

The shameful reality is that Australians have lost control of their own country. The Great South Land is now in northern hemisphere hands. Our destinies are directed from the boardrooms and speculative markets of New York, Chicago, Tokyo and London. In such ethics-less environments, the Australian people are merely another set of commodities to be bought and sold.

Thus, before we can hope to tackle the human misery of mass unemployment and alienation, we all need to put Australia first! Our purchasing and banking decisions are a great place to start! Aussie-owned companies desperately need your support. We need leaders in society who refuse to abandon our lives and futures to the international markets. Will you help Australia?

Paul F. Tobias, Convenor, New Australia Movement, 107 Edgevale Road, Kew, Vic. 3101, Australia.

Re: Lost Inventor

Dear Editor: Can any NEXUS reader provide me with information about, or recommended articles or a biography concerning Abner Doble (and, I think, his brother), great American steam-power engineer and inventor of the '20s, '30s, '40s and perhaps beyond?

I believe Abner Doble's work if not actually suppressed was certainly thwarted by vested interests, namely the major international oil companies and cartels and giant car companies manufacturing internal combustion-powered vehicles. Doble worked in his native America and also in New Zealand, Great Britain and Germany.

Any information would be gratefully acknowledged.

Bruce Turner, PO Box 1080, Windsor, Vic. 3181, Australia.

Re: Waking Up

Dearest Duncan: After just buying the latest issue of NEXUS and reading the letter whereby the question was raised, "Why isn't NEXUS prohibited by those whose conspiracies are being aired?", I realised the answer is simple.

NEXUS has such a following, so many people are waking up, that a ban on NEXUS would bring big protests—judging by the passion of the readers. Does the government or those in the NWO want publicity for NEXUS? No. Hardly anybody, the majority, knows it exists. These guys have their hands tied!

I would like to say I love your magazine, have been reading it for 18 months, and I am very optimistic about the future. Although this is the dark before the dawn, momentum of public opinion is gathering, and many people who would have been closed to the idea of conspiracies are beginning to get fed up and learn what others are capable of. Things will snowball, and life will be much different in the future.

Thanks for the magazine, and God bless!

Lovingly,
Linda A., Chelsea, Victoria, Australia.

Re: Musical Chemistry

Dear Editor: I am in research on the effects of musical notes on the chemical elements, in relation to how certain sounds of the musical scale could influence chemicals. Example: what note or notes on the musical scale could change or alter the molecular structure of the element potassium?

If you have any theories on this or have experimented on this thesis, please respond to:

Don Dreis, 405 E. 7th Street, #4, Bloomington, IN 47408, USA.

Re: Yet More Dirty Tricks

Dear Duncan: I read with interest the letter on weather control in the last issue, and "More Dirty Tricks" in the Global News section (2#23).

Wilhelm Reich describes his 'cloud-busting' machine in his book, *An Introduction to Orgonomy*. There was a state versus state court case in America some years ago, where rain that was caused to fall on one state was sued for by another, since it may have fallen there naturally under normal circumstances. The threat of class-action suing can thankfully slow down many 'dirty tricks' campaigns like this weather one.

As for Chilean grapes and more dirty tricks by the US FDA, it couldn't happen here, could it? Wrong again. Watch what's happened with the Therapeutic Goods Act from Canberra, livestock exports and supposed pesticide contamination, and good old Edgell Australia—or was that Petersville, Vic? So how come all Edgell/Birdseye cheques are signed General Foods (US)?

Keep up the good work.
S.R., Derby, Tasmania, Australia.

Re: Free Energy Hope/Hype?

Dear Duncan: Firstly, congratulations on an excellent magazine. Your unbiased, non-political treatment of broad-spectrum issues to do with human rights, the environment and higher consciousness thinking are to be highly praised. A publication long awaited by thousands if not millions of people hungry for something more than that put forward by the powers that be and those with strong interests vested in keeping things the way they are.

Unfortunately, however, it looks as if you as well as many of your readers (including myself) have been hoodwinked!—yes, hoodwinked by a number of unscrupulous individuals who want us to send money for books and plans on hypothetical free-energy devices. Shame on these people who prey on the minds of innocent people who only want to see a better world.

It has now been over two years since we were first promised something, and nothing has emerged. If these people really have something, then either we would have seen something by now or these people are so greedy that they want to keep all proceeds for themselves (vested interests again), thereby playing right into the hands of the people who want to keep things as they are.

Yours sincerely,
David D., Buderim, Queensland, Australia.

Re: Lending Library

Dear Duncan: Thank you for a superb publication with many great articles which tie together this incredible social jigsaw that we're living through today!

The many books and videos that you review would make exciting reading, I'm sure; however, being a pensioner, it's impossible to find the hundreds of necessary dollars to satisfy the mental appetite.

Do you have or do you know of anyone/anywhere who has a 'lending library' facility? Public libraries are just not up to date.

If not, maybe it is an idea that you could consider, for I'm sure there are many of us who would like to be better informed but cannot afford it!

Keep up the good work.
M.C., Tamborine Mountain, Queensland, Australia.

(Dear M.C.: Many readers have successfully requested their local libraries to obtain our books and videos. Also, several video stores have purchased videos for hire at the request of readers. Ed.)

Re: Lucky NEXUS Readers

Dear Editor: Firstly, I'd like to say what an amazing magazine NEXUS is. My husband and I have become avid readers. I feel every time I read it that a curtain has been lifted from in front of my eyes and I see more clearly.

But!!!—yes, there is a but. Even though this happens, I still feel lucky to live in the democracy we have. It's not perfect and probably never will be with all its deceptions, intrigue, corruption and straight-out lies. I can't help but think I could have been born and died in the Killing Fields, or seen my family slaughtered by Idi Amin, or terrified by a fanatical religious oppression.

So when your readers read NEXUS, just remember: you can...

Looking forward to future issues,
Dorothy A., Edge Hill, Qld, Australia.

Re: Cancer Success

Dear Duncan: Congratulations on your publishing of the article, "A Cause For All Cancer?" (vol.2 #22). I am already the longest survivor of secondary bone cancer: ten years on Max Gerson therapy and both Regeneresen and mistletoe from Germany, until I read that article, and now I am free from cancer with Hulda Regehr Clark herbs.

It may be of interest to cancer patients that once the cancer is killed they need to rebuild their bodies, and the mistletoe from Germany will repair the damage real quick.

In a few days I will forward on to you some artwork about my book for you to advertise.

I have bought so many of your Oct-Nov '94 NEXUS and given them to people in hair salons, beauty salons, etc., and they have con-

... more Letters to the Editor ...

tacted the companies to remove the propyl solvents. It already is causing a huge concern here; also in Germany. I faxed all the information on to everyone I know to buy your magazine.

Have a very happy Christmas and keep up the fabulous work.

Kind regards,

Prue Hickey-Kelly, Doubleview, Western Australia.

(Dear Prue: You are not alone. Quite a few readers have already phoned us to say that they were witness to some amazing recoveries after using the three parasite-cleansing herbs mentioned in the article. We will be publishing their letters as they come in. Ed.)

Re: Defenceless Australia

Dear Duncan: The following events when viewed individually usually cause little or no concern to the average Australian citizen.

However, when viewed communally or as a whole, they may cause concern in some quarters.

On 14 December, an article appeared by *The Australian* newspaper's defence writer, Cameron Stewart, titled "Military to Melt Down Surplus Weapons" (worth more than \$100 million).

It stated that the Federal Government had ordered the Defence Department to arrange for BHP to destroy and melt down all surplus 7.62 SLR and 5.56 M16 military rifles, of more than 100,000 in total.

None was to be sold to Australian citizens, given the push for stricter gun laws.

Only a feeble protest from Senator Bob Woods of the Federal Opposition protested this order. It is supported by most unions, the media, most religions and Muslim leaders.

In 1991 the Federal Government sold overseas 100,000 .303 rifles, 8,300 Bren guns and 3,000 Vickers machine guns. What could not be sold was destroyed. There are now no reserve supplies.

The Defence Department has ordered the manufacture of 67,000 Australian-designed F88 Steyer 5.56-calibre assault rifles at a manufactured cost of \$2,100 each. So far, only about 30,000 have been made.

However, due to the design which incorporates plastic components in major parts, an order no. 7196-94 has been issued to all Army and Air Force units not to

fire more than 90 rounds or nine seconds of automatic fire, otherwise these and other plastic components will melt down.

The Federal Labor Government paid \$2 million of taxpayers' money to buy out and shut down the only private Australian manufacturer of a military rifle, the SAR 5.56 in Tasmania, about three years ago and forbids BHP to manufacture a military rifle of Australian design.

All military rifles are now prohibited items in all states except Tasmania and Queensland.

The Government has signed a UN Treaty Section 91984, which commits all of Australia to complete and general disarmament. These are acts of treason and sabotage, and, do, in fact, contravene Sections 24A and B of the Crimes Act.

However, our nearest neighbour Indonesia, with a population of between 180 and 200 million and the largest Muslim community in the world, is not bound by any such treaties.

They are presently expanding all their military forces at an exceptionally high rate. A \$10 billion expansion of their aircraft industry is now well established. The aircraft and naval vessels are all mainly a military design.

While in Australia last year, 14 per cent of our Naval forces, 13 per cent of our Army and 7.5 per cent of our Air Force personnel resigned. From a total force of 63,200, most are now only being trained in urban warfare or citizen-type control operations.

According to an article by Brian Toohey in *The Sun-Herald* on 20 November, it is revealed the Indonesian Army units are being trained in three Australian training establishments and that information on all Australian dissident groups and individuals is being made available to the Indonesian Kopassus special force units.

These are the ones who control Timor and other protestors by shooting them. Our Federal Government maintains that these special arrangements and the vast sums of money which we contribute for training and expanding the Indonesian military are essential to the aim of building closer ties with them and Asia.

However, in *The Australian* on 16 December, General Benny Murdani, the Indonesian strongman in the group that controls Indonesia,

insisted that Australia was not seen as a member of the South-East Asian community and Australia would not become one of ASEAN's most inner circle.

What else could be the possible reason for virtually all our politicians and organisations agreeing to allowing us to become almost totally defenceless? Nothing ever happens by accident in politics; there is always a reason...

Sincerely,

Bob Doring, ARBA, PO Box 6012, Mooloolah Valley, Qld 4553, Australia.

Re: Harping on the Weather

Dear Duncan and NEXUS: Re Letters to the Editor (vol.2#23, "HAARP Patent" and "Weather Control"), while the patents only cover weather and death-ray capabilities, it is much more capable than the patent says. The true capabilities of the HAARP (harp) are less than music to your ears—for example, El Niño and HAARP, Bermuda Triangle and the HAARP principle or sonic applications (see NEXUS vol.2#18,19).

Also, this Alaskan project could change the electromagnetic field setting of the north/south poles, thereby placing Earth right in the path of a comet, be it Halley's or not. And *Exxon Valdez*: accident or fuel transport for HAARP? Using a *Jacaranda Atlas* I noticed that the north pole (magnetic) sits around about 55 degrees east of Alaska, and if HAARP was placed in Alaska closest to the north pole, then it has the ability to mimic the magnetic north pole and cause compasses to read ± 50 to 60 degrees out. If this is true, then was Bermuda Triangle using similar compass/radio knockout abilities?

As I use CBs (27 MHz AM band), I am very aware of the need for decent atmospheric conditions. During the day, picking up the USA is hard; however, at night, this all changes. Has anyone picked up more than the local radio stations, like Brisbane picking up 3AW in Melbourne, or Gladstone, Qld picking up a Sydney station from a car cassette/radio?

Russell M., 6 Hansen Crescent, Gladstone, Qld 4680, Australia.

Re: Cosmic Conspiracy

Dear Sir: Your Dec-Jan issue was especially interesting. Mark Harp will sell his hollow earth jive only to the hollow-headed, but Stan Deyo's cosmic conspiracy is more

reasoned.

It brings to mind the late James Forrestal who, as US Secretary of Defense in 1949, suicided after going bananas right in the Pentagon. He babbled about the "space people" who were about to attack us, and that we were defenceless.

Officialdom explained that his breakdown was due to the "pressures of the Cold War" and maybe so, but his paranoia was centred upon not the Soviets but said space people. Friends reported that he'd told them that the weirdos could appear as normal humans and had already infiltrated the most sensitive parts of the government; that they'd even tapped his phones and mail.

Sundry UFO researchers ended up paranoid too, but what induced it?

As to the Piri Reis atlas of pre-history, it shows mountain ranges in Canada and Alaska that were unknown to even the US Army Map Service until it commenced aerial surveys. Greenland and Antarctica are depicted in an unglaciated state, correctly exposing each of them as being comprised of three islands (which we have never seen). Who were these cartographers who charted our globe even before the last glacial epoch?

Yours truly,

George L., Redfern, NSW, Australia.

Re: Exposing Truths

Dear Duncan: In the Dec-Jan issue an anonymous reader wrote regarding why NEXUS does not get closed down for exposing supposed truths.

Well, one answer to this is that NEXUS is too big a voice to be easily silenced. If someone did try to silence NEXUS magazine or close it down altogether, everyone would realise that the magazine has treaded on someone's toes and told the truth about something or someone.

This is just like the UFO researcher who has a background and is well known for his place in the scientific community. He is too well known, too big a voice to silence without attracting attention to themselves. But the little man, unknown to all but his friends, could easily be silenced.

I hope I have made my point clear. The more you say and do, the harder you are to be silenced.

Mags, Queensland, Australia.
